

**You and Adverse Growth in a Child: Your 'Aha Moments',
A weekend full of insights in helping children.**

Number of CE Hours: 20

Course Dates and Times:

* Friday, Nov. 30, 2018

* Sat., Dec. 1, 2018

Location:

Meeting Hotel Longview, Texas

Instructor:

Dr Chris Baker, RN, DMD

This weekend is for the pediatric dentist and staff, the general dentist and staff who treat children, and the dentist who would like to grow their knowledge, comfort and patient base of children, child growth and development and intervention care.

Learn in this ELEMENTS weekend:

- The weekend gears up with a look at the amazing areas in which you can help children: Areas including bedwetting, behavioral disorders, lack of energy, fatigue, learning disorders, ADD/ADHD, sleep issues, childhood sleep apnea and airway difficulties, coping difficulties, wonky teeth, habits, adverse growth, beauty, impaired immune response and many others.
- Learn new ways to use skills that you already have, to grow your practice and serve your patients.
- Can you imagine having a real and great answer for the mom who says, "What should I do about his grinding?"
- Or, a real and great answer for, "What can I do about his bad breath? He's been checked out - it's not allergies, or GERD or anything like that." And the answer can reduce the risk of decay!
- What questions to ask on your health history that truly help you help the child.
- What age to evaluate various signs and symptoms. When do they "matter"?
- What age to take a panoramic x-ray, and what to look for. There's a LOT there.
- Why a habit creates lifetime challenges.
- What will the dentition's reaction to a habit be, and how severe might it be. (Depends on the child's growth direction.) How to figure that direction out.
- What the best approach is to an oral habit. Learn the best age to treat.
- Diagnosis and treatment planning of feeding and frenum adversities
- The magic of expansion and expanders. What can they do? (More than you imagine) What age is best? What design is best?
- Managing your practice around and for today's child patients and parents. Some great strategies.
- and always, bring your cases for case review.
